

August 27, 2014

Greetings,

BroadSoft is pleased to announce that the Konftel 300IP has been formally validated with BroadWorks. The device model(s) listed below have been validated as interoperable with the BroadWorks SIP interface. Configuration details and any issues or limitations identified during the interoperability testing are documented in the BroadSoft Partner Configuration Guide (PCG) *PartnerConfigGuide Konftel 300IP*. The PCG is available to BroadSoft customers on the BroadSoft Xchange website, <http://xchange.broadsoft.com>.

BroadSoft validates that the device interoperates with the BroadWorks SIP interface. BroadSoft does not validate qualitative aspects of the device, capacity, or other device capabilities outside the scope of the SIP signaling interface.

The validation covers the Konftel version(s) and BroadWorks release listed below. Other versions tested previously are documented in the PCG.

Konftel 300IP version 2.2.9 *
BroadWorks Release 20.sp1 **

*This validation also applies to all subsequent compatible maintenance releases to this device version.

**Test results are observed as compatible with BroadWorks Releases 19.0, 19.sp1, 20.0.

Best Regards,
