Konftel 300IP and Skype

What you need

- A Skype manager account (http://manager.skype.com)
- A Konftel 300IP connected to a internet connection

Step 1

Login to your Skype manager account and create a Skype connect profile. Follow the guide:
Step 2

When the profile is created you’ll receive a username, password and Skype connect address.
Step 3

Enter that information in the Konftel 300IP web interface under the “Settings” > “SIP” tab

Save the settings in the web interface. The phone should now be registered to the Skype server.

You must also change the DTMF settings under “Media” to “Inband”. Also check that you have the latest version under “Provisioning”.

Step 4

To be able to call you must add at least one (1) “Channel subscription” and add credit to the profile. The Konftel 300IP can handle up to 4 channels at the same time.

You should now be able to call with the Konftel 300IP. Make sure that you enter the country code if you want to dial a number (eg. 46 for Sweden). It’s not possible to call directly to a Skype contact that doesn’t have a public number.
