

Wireless headset

A wireless office headset can be connected to provide greater flexibility. It helps improve audio clarity when one person is more active in the conversation. It also enables you to move about and turn away from the Konftel 200AUX (for example, if you need to write on a whiteboard) without loss of audio quality.

The microphone on the Konftel 200AUX is still active, allowing all participants to join in the conversation.

Note! Always disconnect the power supply from the electrical outlet when disconnecting or connecting equipment to the Konftel 200AUX.

Connect the cable 900102085 between the AUX outlet and the headset phone connection and adjust levels according to headset manual.

Note that the microphone on the Konftel 200AUX and the headset microphone are active simultaneously.

To adjust the headset, move away from the Konftel 200AUX so that your voice cannot be picked up from the microphone. Move into another room if the room isn't large enough.

Refer to the Konftel website, www.konftel.com/200AUX for compatibility and recommended headset settings.
